OSF-INDEX Family Map

The Open Source Firefighter

Document Family — Map & Register of Record

v1.0 · August 2026 · Page one of the family · This document is the index of record

> **Mission.** A treatise on a new interface firefighting technology that enables the incident commander with a strategic resource at the line of contact. *Document ID:* ***OSF-INDEX*** *· this register governs version control for the family.*

Andrew Morton · Palmer Lake, Colorado

This work is dedicated to Emily Barker, Nick Hutcherson, and Sydney Watson of the Rifle Helitack crew, killed in a burnover during initial attack on the Knowles Fire, western Colorado, June 27, 2026 — and to the two crewmates who survived it, and to all wildland firefighters who stand between fire and the rest of us.

They were the first to arrive. This system exists so that the ground they arrive on is already fighting back.

> **DISTRIBUTION.** The family is under a pre-filing hold: nothing is published until filing day. Reviewers receive scoped packages. The author keeps separate working notes — drafting material, contact lists, and planning files — which are not part of this family and are not published.

How to read the map

The family is a spine with layers. One document sets the rules; the specification is the spine; three layers hang off it — what extends it, what applies it, what translates it outward. Read top to bottom: rules govern the spec, the spec is extended by its annexes, and everything else either *draws from* the spec (application) or *simplifies* it (adoption).

FOUNDATION — the rules the box obeys
OSF-0 Design Philosophy

▼ governs

SPECIFICATION — the spine (what the system is)
OSF-1 Main Specification · **OSF-1.2** Annex A · **Annex A, Appendix A** Parts Catalog
OSF-1.2 Hardware Annex A *(incl. Parts Catalog)*
OSF-4 Software Requirements & Development Roadmap

▲ draws from | simplifies ▲

APPLICATION — how it fights	**ADOPTION — the outward face**
OSF-2 Tactics Paper (Combined Arms)	**OSF-3** Public Overview
OSF-2.1 Deadman Fire Scenario	**OSF-3.1** Community Adoption Briefing
	OSF-3.2 Public Roadmap
	OSF-3.3 Inspector's Review Draft
	OSF-3.5 The Training Range

The Register (control of record)

Every document, its current version, intended reader, and status. Version integrity lives here: if a version below does not match the version on a document in hand, the document in hand is stale.

ID	Document	Ver	Primary reader	Status
OSF-0	Design Philosophy	1.0	Builders, reviewers	Current
OSF-1	Main Specification	1.0	Implementers	**Current — assembled; Section Pack incorporated**

				in full
OSF-1.2	Hardware Annex A	1.0	Builders, electronics, test	Current
OSF-1.3	Annex C — Wire Format & Vocabulary	1.0	Protocol / firmware	**Consolidated** — folded into OSF-1 as Appendix C
OSF-1.4	Common Parts Catalog	1.0	Builder	**Consolidated** — folded into OSF-1.2 as Appendix A
OSF-2	Tactics Paper (Combined Arms)	1.0	Fire officers, planners	Current
OSF-2.1	Deadman Fire Scenario	1.0	All reviewers	Current (v1, v2 retained as detail bank)
OSF-2.2	Supply & Coverage Planning Table	1.0	—	**Superseded — folded into OSF-2 v1.3, Appendix A**
OSF-3	Public Overview	1.0	Everyone — start here	Current
OSF-3.1	Community Adoption Briefing	1.0	Councils, communities	Current
OSF-3.2	Public Roadmap	1.0	Funders, contributors	Current
OSF-3.3	Inspector’s Review Draft	1.0	AHJ, inspectors	Review instrument — folds into Code-Format Edition after board marks return
OSF-3.4	Visual Aids / Image Prompt Pack	1.0	Internal	Documentation
OSF-3.5	The Training Range (Vision)	1.0	Forestry, VFDs, range managers	Current — adoption tier, bridges application
OSF-4	Software Requirements & Development Roadmap	1.0	Developers, implementers, AI agents	Current — software lane; expected to revise faster than the spec

Reading paths (where a given reader starts)

The family is large; no one reads all of it first. Enter by role.

Reader	Path
Everyone (orientation)	OSF-3 → then branch by interest
Enclosure / code / inspection	OSF-3 → OSF-3.3
Comms / test authority	OSF-3 → OSF-1.2 → OSF-3.2 (workstream 7) → OSF-3.3
Electronics / protocol / firmware	OSF-1.2 → OSF-1 (Appendix C)
Software developer / implementer	OSF-4 → OSF-1 (Appendix C, coordination sections) → OSF-2.1
In-hand / tactical use	OSF-3 → OSF-1.2 (Tactical class) → OSF-2 (Appendix A)
Command / installation	OSF-3 → OSF-1 → OSF-2 → OSF-3.1
Fire officer / planner	OSF-3 → OSF-2 → OSF-2.1 → OSF-2 (Appendix A)
Council / community	OSF-3 → OSF-3.1

Funder / program officer	OSF-3 → OSF-3.1 → OSF-3.2
Builder / maker	OSF-3 → OSF-1.2 (incl. Appendix A parts) → OSF-1 (Appendix C)

Why this replaces the classified-style control sheet

A control sheet exists to answer *what is current and where did it come from* — provenance and version. This family's problem is different: the compartments are only two and the provenance is a single continuous record, so derivation tracking adds nothing. What a reader actually needs is *orientation* — where to start, how the layers relate, and whether the copy in hand is current. This page keeps the two control concepts that still earn their place — **compartment marking** and a **versioned register with supersession** — and spends the rest of the page on the map and the reading paths, which is what an open family needs that a classified one never did: a front door.

This index is maintained as documents version. When the register and a document disagree, the register governs.
